#### QUESTION 6

Your company uses Microsoft Deployment Toolkit (MDT) to deploy Windows 10 to new computers.

The company purchases 1,000 new computers.

You need to ensure that the Hyper-V feature is enabled on the computers during the deployment.

What are two possible ways to achieve this goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Add a task sequence step that adds a provisioning package.
- B. In a Group Policy object (GPO), from Computer Configuration, configure Application Control Policies.
- C. Add a custom command to the Unattend.xml file.
- D. Add a configuration setting to Windows Deployment Services (WDS).
- E. Add a task sequence step that runs dism.exe.

Correct Answer: CE

A common way to add a feature such as Hyper-V in MDT is to use the Install Roles and Features task sequence action. However, that is not an option in this question.

The two valid options are to add a command to the Unattend.xml file or to add a task sequence step that runs dism.exe.

To add Hyper-V using dism.exe, you would run the following dism command:

DISM /Online /Enable-Feature /All /FeatureName:Microsoft-Hyper-V
