QUESTION 1

You have a Microsoft 365 subscription.

You have the devices shown in the following table.

Operating system	Quantity
Windows 8.1	5
Windows 10	5
Windows Server 2016	5

You need to onboard the devices to Windows Defender Advanced Threat Protection (ATP). The solution must avoid installing software on the devices whenever possible.

Which onboarding method should you use for each operating system? To answer, drag the appropriate methods to the correct operating systems. Each method may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Methods	Answer Area	
A Microsoft Azure ATP sensor	Windows 8.1	
A local script	Windows 10:	
Microsoft Monitoring Agent	Windows Server 2016:	

Correct Answer:

Methods	Answer Area	
A Microsoft Azure ATP sensor	Windows 8.1	Microsoft Monitoring Agent
A local script	Windows 10:	A local script
Microsoft Monitoring Agent	Windows Server 2016:	Microsoft Monitoring Agent

Box 1:

To onboard down-level Windows client endpoints to Microsoft Defender ATP, you'll need to:

Configure and update System Center Endpoint Protection clients.

Install and configure Microsoft Monitoring Agent (MMA) to report sensor data to Microsoft Defender ATP

Box 2:

For Windows 10 clients, the following deployment tools and methods are supported:

Group Policy

System Center Configuration Manager

Mobile Device Management (including Microsoft Intune)

Local script

Box 3:

Windows Server 2016 can be onboarded by using Azure Security Centre. When you add servers in the Security Centre, the Microsoft Monitoring Agent is installed on the servers.

QUESTION 2

SIMULATION

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality

(e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are

able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username:

admin@M365x981607.onmicrosoft.com

Microsoft 365 Password: *yfLo7lr2andy-

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10811525

You plan to invite several guest users to access the resources in your organization.

You need to ensure that only guests who have an email address that uses the @contoso.com suffix can connect to the resources in your Microsoft 365 tenant.

A. See below.

Correct Answer: A

You need to add contoso.com as an allowed domain in the 'External collaboration settings'.

1.

Go to the Azure Active Directory admin center.

2.

Select Users then select 'User settings'.

3.

Under External Users, select the 'Manage external collaboration settings'.

4.

Under 'Collaboration restrictions', select the 'Allow invitations only to the specified domains (most restrictive)' option.

5.

Under, Target Domains, type in the domain name 'contoso.com'

6.

Click the Save button at the top of the screen to save your changes.

References: <https://docs.microsoft.com/en-us/azure/active-directory/b2b/allow-deny-list>

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You discover that some external users accessed content on a Microsoft SharePoint site. You modify the SharePoint sharing policy to prevent sharing outside your organization.

You need to be notified if the SharePoint policy is modified in the future.

Solution: From the Security and Compliance admin center, you create a threat management policy.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

We can create a threat management policy to alert us when the sharing policy is changed.

Create a new Alert policy > under Category select Threat Management > under `Activity is` scroll down to the `Site administration activities` and select `Changed a sharing policy`.

QUESTION 4

HOTSPOT

Your network contains an on-premises Active Directory domain named contoso.com.

Your company purchases a Microsoft 365 subscription and establishes a hybrid deployment of Azure Active Directory (Azure AD) by using password hash synchronization. Device writeback is disabled in Azure AD Connect.

You create a new user named User10 on-premises and a new user named User20 in Azure AD.

You need to identify where an administrator can reset the password of each new user.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

User10

	▼
Azure AD only	
On-premises Active Directory only	
On-premises Active Directory or Azure AD	

User20

	▼
Azure AD only	
On-premises Active Directory only	
On-premises Active Directory or Azure AD	

Correct Answer:

User10

	▼
Azure AD only	
On-premises Active Directory only	
On-premises Active Directory or Azure AD	

User20

	▼
Azure AD only	
On-premises Active Directory only	
On-premises Active Directory or Azure AD	

If a user account is created in the on-premise Active Directory and synchronized to Azure Active Directory, you can reset the password of the user account in the on-premise Active Directory only. If a user account is created in Azure Active Directory, you can reset the password of the user account in the Azure Active Directory only.

QUESTION 5

Your company has a Microsoft 365 subscription.

You need to identify all the users in the subscription who are licensed for Microsoft Office 365 through a group membership. The solution must include the name of the group used to assign the license.

What should you use?

- A. the Licenses blade in the Azure portal
- B. Reports in the Microsoft 365 admin center
- C. Active users in the Microsoft 365 admin center
- D. Reports in Security and Compliance

Correct Answer: A

In the Azure AD Admin Center, select Azure Active Directory then select Licenses to open the Licenses blade. From there you need to click on the 'Managed your purchased licenses link'. Select a license you want to view, for example Office 365 E3. This will then display a list of all users with that license. In the 'Assignment Paths' column, it will say

`Direct` for a license that has been assigned directly to a user or `Inherited (Group Name)` for a license that has been assigned through a group.

Reference: <https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-groups-assign>

QUESTION 6

You have a Microsoft 365 subscription.

From the Security and Compliance admin center, you create a content search of all the mailboxes that contain the word ProjectX.

You need to export the results of the content search. What do you need to download the report?

- A. an export key
- B. a password
- C. a user certificate
- D. a certification authority (CA) certificate

Correct Answer: A

When you export a report, the data is temporarily stored in a unique Azure Storage area in the Microsoft cloud before it's downloaded to your local computer. To download the report from the Azure Storage Area, you need an export key.

Reference: <https://docs.microsoft.com/en-us/microsoft-365/compliance/export-a-content-search-report>

QUESTION 7

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant.

Solution: You use Dashboard in Security and Compliance.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

Depending on what your organization's Office 365 subscription includes, the Dashboard in Security and Compliance includes several widgets, such as Threat Management Summary, Threat Protection Status, Global Weekly Threat Detections, Malware, etc. It does not display a list of the features that were recently updated in the tenant so this solution does not meet the goal.

To meet the goal, you need to use Message center in the Microsoft 365 admin center. Reference:
<https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/security-dashboard>

<https://docs.microsoft.com/en-us/office365/admin/manage/message-center?view=o365-worldwide>

QUESTION 8

You have a Microsoft 365 subscription.

A new corporate security policy states that you must automatically send DLP incident reports to the users in the legal department.

You need to schedule the email delivery of the reports. The solution must ensure that the reports are sent as frequently as possible.

How frequently can you schedule the delivery of the reports?

- A. hourly
- B. monthly
- C. weekly
- D. daily

Correct Answer: C

From the Dashboard in the Security and Compliance center, you can view various reports including the DLP Incidents report. From there you can configure a schedule to email the reports. In the schedule configuration, there are two choices for the frequency: Weekly or Monthly. Therefore, to ensure that the reports are sent as frequently as possible, you need to select Weekly.

Reference: <https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/create-a-schedule-for-a-report>

QUESTION 9

You have a Microsoft Azure Active Directory (Azure AD) tenant that contains the users shown in the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Your company uses Windows Defender Advanced Threat Protection (ATP). Windows Defender ATP contains the roles shown in the following table.

Name	Permission	Assigner user group
Windows Defender ATP administrator (default)	View data, Alerts investigation, Active remediation actions, Manage security settings	Group3
Role1	View data, Alerts investigation	Group1
Role2	View data	Group2

Windows Defender ATP contains the device groups shown in the following table.

Rank	Machine group	Machine	User access
1	ATP1	Device1	Group1
Last	Ungrouped machines (default)	Device2	Group2

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area	Statements	Yes	No
	User1 can view Device1 in Windows Defender Security Center.	<input type="radio"/>	<input type="radio"/>
	User2 can sign in to Windows Defender Security Center.	<input type="radio"/>	<input type="radio"/>
	User3 can view Device1 in Windows Defender Security Center.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area	Statements	Yes	No
	User1 can view Device1 in Windows Defender Security Center.	<input checked="" type="radio"/>	<input type="radio"/>
	User2 can sign in to Windows Defender Security Center.	<input checked="" type="radio"/>	<input type="radio"/>
	User3 can view Device1 in Windows Defender Security Center.	<input checked="" type="radio"/>	<input type="radio"/>

Box 1:

Yes. User1 is in Group1 which is assigned to Role1. Device1 is in the device group named ATP1 which Group1 has access to. Role1 gives Group1 (and User1) View Data Permission. This is enough to view Device1 in Windows Security Center.

Box 2:

Yes. User2 is in Group2 which is assigned to Role2. Role2 gives Group2 (and User2) View Data Permission. This is enough to sign in to Windows Security Center.

Box 3:

Yes. User3 is in Group3 which is assigned the Windows ATP Administrator role. Someone with a Microsoft Defender ATP Global administrator role has unrestricted access to all machines, regardless of their machine group association and

the Azure AD user groups assignments.

Reference:

<https://docs.microsoft.com/en-us/windows/security/threat-protection/microsoft-defender-atp/user-roles>

<https://docs.microsoft.com/en-us/windows/security/threat-protection/microsoft-defender-atp/rbac>

QUESTION 10

Your network contains an Active Directory forest. The forest contains two domains named contoso.com and adatum.com.

Your company recently purchased a Microsoft 365 subscription.

You deploy a federated identity solution to the environment.

You use the following command to configure contoso.com for federation.

```
Convert-MsolDomainToFederated ?omainName contoso.com
```

In the Microsoft 365 tenant, an administrator adds and verifies the adatum.com domain name.

You need to configure the adatum.com Active Directory domain for federated authentication.

Which two actions should you perform before you run the Azure AD Connect wizard? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. From Windows PowerShell, run the `Convert-MsolDomainToFederated?omainName contoso.com ?upportMultipleDomain` command.

B. From Windows PowerShell, run the `New-MsolFederatedDomain?upportMultipleDomain -DomainName contoso.com` command.

C. From Windows PowerShell, run the `New-MsolFederatedDomain -DomainName adatum.com` command.

D. From Windows PowerShell, run the `Update-MSOLFederatedDomain?omainName contoso.com`

?upportMultipleDomain command.

E. From the federation server, remove the Microsoft Office 365 relying party trust.

Correct Answer: AE

When the Convert-MsolDomaintoFederated ?omainName contoso.com command was run, a relying party trust was created.

Adding a second domain (adatum.com in this case) will only work if the SupportMultipleDomain switch was used when the initial federation was configured by running the Convert-MsolDomaintoFederated ?omainName contoso.com

command.

Therefore, we need to start again by removing the relying party trust then running the Convert-MsolDomaintoFederated command again with the SupportMultipleDomain switch.

QUESTION 11

You publish an enterprise application named App1 that processes financial data.

You need to ensure that access to App1 is revoked for users who no longer require viewing the processed financial data.

What should you configure?

- A. an owner
- B. an app protection policy
- C. an access review
- D. a conditional access policy

Correct Answer: C

Reference: <https://docs.microsoft.com/en-us/azure/active-directory/governance/create-access-review>

QUESTION 12

HOTSPOT

Your company has an Azure Active Directory (Azure AD) tenant named contoso.com and a Microsoft 365 subscription.

Contoso.com contains the users shown in the following table.

Name	Group
User1	Group1
User2	None

You add an enterprise application named App1 to contoso.com.

You configure the following self-service settings for App1:

Allow users to request access to this application is set to Yes.

To which group should assigned users be added is set to Group1.

Who is allowed to approve access to this application is set to User2.

Require approval before granting access to this application is set to Yes.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
User1 can request access to App1.	<input type="radio"/>	<input type="radio"/>
When User2 requests access to App1, the user is added to Group1 automatically.	<input type="radio"/>	<input type="radio"/>
User2 can approve requests for App1.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area

Statements	Yes	No
User1 can request access to App1.	<input checked="" type="radio"/>	<input type="radio"/>
When User2 requests access to App1, the user is added to Group1 automatically.	<input type="radio"/>	<input checked="" type="radio"/>
User2 can approve requests for App1.	<input checked="" type="radio"/>	<input type="radio"/>

Box 1: Yes.

User1 can request access to App1 because "Allow users to request access to this application" is set to Yes.

Box 2: No.

User2 is an approver. If User2 requests access to App1, he will still need to approve the request before he is added to Group1.

Box 3: Yes.

User2 can approve requests for App1 because "Who is allowed to approve access to this application" is set to User2.

Reference: <https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/manage-self-service-access>

QUESTION 13

SIMULATION

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality

(e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are

able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username:

admin@LODSe426243.onmicrosoft.com

Microsoft 365 Password: 3andYWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You need to modify Christie Cline to meet the following requirements:

Christie Cline must be able to view the service dashboard and the Microsoft Office 365 Message center.

Christie Cline must be able to create Microsoft support requests.

The solution must use the principle of least privilege.

A. See below.

Correct Answer: A

You need to assign Christie the 'Service Support Admin' role.

1.

In the Microsoft 365 Admin Center, click 'Roles'.

2.

Scroll down to the Service Support Admin role and click on the role name.

3.

Click the 'Assigned Admins' link.

4.

Click the 'Add' button.

5.

Start typing the name Christie then select her account when it appears.

6.

Click Save.
